SKILLS

- **Languages:** Kotlin, Java, SQL
- **Android Development:** Jetpack Compose, XML, MVVM, ViewModel, Coroutines, Dagger Hilt, Retrofit, Glide, Coil, Room, Canvas API, Compose Animations, Crashlytics, Lifecycle Components
- **Tools:** Git, Postman, Android Studio, Firebase
- **Backend & APIs:** Spring Boot, Spring Security, Hibernate, REST APIs
- **Databases & Cloud:** Firebase (Firestore, Realtime DB, Auth), PostgreSQL, RoomDB, SQLite

EXPERIENCE

Android Developer Intern – SaveSage

Aug 2025 – Present

Android Development | Mobile Engineering

Gurugram, Haryana

- Fixed major crashes and runtime issues across critical app modules, leading to a **20% reduction in crash frequency** and significantly improving overall app stability, reliability, and long-term performance
- Built the end-to-end credit score module using Jetpack Compose with **interactive graphs** and **Canvas-based visuals**, delivering clearer and more engaging score insights for users
- Developed the card recommendation flow with smooth **Compose animations** and state-driven UI to enhance user decision journeys
- Improved overall UX by **refining layouts, navigation, and responsiveness** for consistent performance across devices

Adversarial Nibbler Program – Google

Oct 2024 – Jan 2025

AI Safety & Responsible AI Research

Remote

- Conducted **50+ adversarial prompt experiments** to identify vulnerabilities in generative AI systems, reducing unsafe output generation through consistent evaluation, categorization, and mitigation efforts.
- Designed and executed **10+ testing strategies** to improve evaluation accuracy by 34% and enable fine-tuning of detection pipelines
- Simulated unsafe prompt scenarios across categories, generating data that enhanced responsible AI filters and auditing tools.

PROJECTS

InstaStudio [\[GitHub\]](#)

Jan 2025 – Present

Photography Studio Management System

Android (Kotlin, Jetpack Compose), Spring Boot, REST APIs

- Architected and developed a full-stack **studio management app** with a native Android frontend and Spring Boot backend, enabling secure, role-based workflows via token authentication for 3 user types.
- Crafted responsive Jetpack Compose UIs with navigation and **state management** for studios, events, members, and resources in a mobile-first flow.
- Integrated backend **REST APIs using Retrofit** and secured token storage on Android with JC Datastore, enabling event scheduling and studio configuration via JWT.
- Ensured seamless **Android-backend integration** by consuming 20+ robust REST APIs tested via Postman and JUnit.

Canvas Drawing Application [\[GitHub\]](#)

May 2024 – July 2024

Digital Sketching Application

Android (Kotlin, XML, Canvas API)

- Built a feature-rich **drawing app** with 5+ creative tools including brush control, color selection, undo-redo, and image saving, receiving 93% positive feedback across diverse users.
- Engineered a **custom View** using Android's Canvas and Paint APIs to enable smooth drawing interactions, supporting stroke rendering with minimal latency, validated across 8+ devices to ensure consistent output.
- Designed structured, **XML-based layouts** to ensure a responsive UI, iteratively refined through feedback and tested by 10+ users for clarity and ease of use.
- Enabled high-quality artwork export and import using bitmap handling with runtime permissions, and robust compatibility across multiple Android API levels and devices.

EDUCATION

Lovely Professional University

Grade – 8.34 CGPA

B.Tech. Computer Science Engineering

Expected Graduation: May 2026
